For the Health of your Patients:

Stress and anxiety have become common side-effects of modern day living, and are especially prevalent during this time of year. **Casein Concentrate** (formerly known as **De-Stress™**) is a patented, all natural, specially produced milk protein hydrolysate, concentrating a specific decapeptide that demonstrates significant anxiolytic activity, as evidenced by several doubleblind, placebo controlled human trials. Additionally, the **Casein Concentrate** natural decapeptide has been tested for three major side effects generally attributed to benzodiazepines (anxiety management, i.e. Valium); dependence, memory loss and tolerance. **Casein Concentrate** is an easy, natural way to reduce your patient's stress and anxiety and has been shown to be safe, as confirmed by the Irwin test showing a satisfactory safety panel.

For the Health of your Practice:

The clinical effectiveness of **Casein Concentrate** (formerly known as **De-Stress™**) has been well documented, and patients often see results with their first dose, making **Casein Concentrate** an "instant gratification product". Double blind human studies have been performed measuring physical and psychological responses to stress. Included were measurements of cortisol, ACTH levels, and systolic blood pressure. In all cases, the **Casein Concentrate** product fared favourably against controls in response to stress. It should be noted that although **Casein Concentrate** is a milk derived product, it is a hydrolysate, therefore it can often be used successfully with patients with dairy sensitivities. Once again, Biotics Research brings you "The Best of Science & Nature".
