

## Weekly Practice Builder

Nutri-Link Ltd, Nutrition House, 24 Milber Trading Estate, Newton Abbot, Devon, TQ12 4SG. UK  
Telephone: +44 (0) 8704 054 002 • Fax: +44 (0) 8704 054 003 • [www.nutri-linkltd.co.uk](http://www.nutri-linkltd.co.uk)

*In response to increasing demand from our Practitioners, Biotics Research has implemented a new e-mail program to bring important, leading-edge information and literature to you, thereby helping facilitate the growth of your practice. Biotics Research products are available exclusively through Healthcare Providers*

### **Our featured supplement of the week is ADHS®**

**Why will patients benefit from ADHS®?** ADHS®, could be an acronym for ADrenal HyperSecretion. ADHS® is a comprehensive and effective adaptogenic formula, providing selective botanical extracts, with pertinent vitamins and minerals. ADHS® serves to replenish nutrients depleted by the stress response, thereby positively supporting adrenal function.

The word stress, coined over seventy years ago by Hans Selye, is one word which has become synonymous with the British lifestyle. British people lead "stressed out" lives as a result of increased daily demands, including job and lifestyle pressures. Dysregulation of the stress system, or a maladaptive neuroendocrine response, has the potential to negatively impact endocrine, metabolic and immune function, leaving patients vulnerable to numerous unwanted health consequences. Additionally, stress increases the need for many nutrients. An extensive body of research provides significant insights into the benefits of providing targeted nutritional support for healthy adrenal function. As always, you can count on Biotics Research Corporation to offer superior nutritional products supplying "The Best of Science and Nature".

#### **Studies you should know about:**

**According to the FDA, meat and milk from cloned animal products are safe for human consumption.** The agency has called cloning merely "a more advanced form of" breeding technologies already widely in use, such as artificial insemination, embryo transfer and in vitro fertilisation. According to Joseph Mendelson, legal director of Center for Food Safety, "Once the FDA says these products are safe and that they are out there, it's very hard to turn it back."

*"Cloned Livestock Poised to Receive FDA Clearance" - The Wall Street Journal, Jan 4, 2008*

**Saving the gall bladder** - Intestinal dysbiosis, changes in erythrocyte density, and intestinal inflammation was correlated with biliary lithogenesis (stones). Following cholecystectomy (gallbladder removal) progressive changes in the intestinal microecology was observed. These changes included inflammation and atrophy of the intestinal mucosa as well as an increased frequency of colon polyps.
