For the Health of your Patients:

From mid-spring and the onset of tree pollens, to late spring's onset of weed pollens, followed by summer's superfluous grass pollens, and a nearly year round onslaught of fungi and mould spores – allergic triggers are ubiquitous. Seasonal changes tend to exacerbate this and hallmark the bane of many people's existence; airborne allergies. An estimated 10-20 million Britons suffer from airborne allergies, which tend to provoke responses such as respiratory symptoms, sinus congestion, nasal drainage, post-nasal drip, coughing, red, watery, runny eyes, and dark undereye circles.

For the Health of your Practice:

Patients experiencing seasonal or airborne irritants rarely present as new patients with new clinical indications. They typically have tried anything and everything in order to alleviate their pervasive symptoms. **HistoPlex-AB**® is an innovative supplement that allows you to efficiently support your patients' symptoms. The unique proprietary blend of standardised herbal extracts found in **HistoPlex-AB®** shares the distinction of having immunomodulating effects. Fritillaria thunbergii is known to have antitussive, astringent, and expectorant functions. It is a source of fritimine, which diminishes the excitability of respiratory centers. Solidago virgaurea, commonly known as European Goldenrod, and Scutellaria baicalensis both function to counteract proinflammatory mediators which may be "triggered" as the body responds to airborne irritation. As its common name indicates, Euphrasia officinalis (Eyebright) has long been used to make 'eyes bright'. Improvements on eye pressure, itchiness, light sensitivity, swelling, and eye drainage have all been noted with use. Morus alba is a source of quercetin 3 (6-malonylglucoside) (Q3MG), a flavonol glycoside which has known antioxidative and antiatherogenic protective effects. Saponins derived from the root of Platycodon grandiflorum have been studied for their multifarious properties including inhibiting Cox-2,TNF-a, and prostaglandin E2 (PGE2) levels. It has also been used to support the expectoration of phlegm and the alleviation of throat irritation. Albizia julibrissin is a species of legume which has known antioxidant properties. This herbal combination, distinct to Biotics Research Corporation is a worthwhile addition to any practitioners' arsenal of botanical preparations. As always, you can count on Biotics Research Corporation to offer superior nutritional products supplying "The Best of Science and Nature".
