In response to increasing demand from our Practitioners, Biotics Research has implemented a new e-mail program to bring important, leading-edge information and literature to you, thereby helping facilitate the growth of your practice. Biotics Research products are available exclusively through Healthcare Providers

Our featured supplement of the week is Bio-Immunozyne Forte™

Why do your patients need Bio-Immunozyne Forte™? The period of time from late winter to early spring marks the height of cold and flu season. Long days spent indoors, confined in arid, close quarters makes for optimal conditions for the spread of viruses. While humidity and basic personal hygiene are of crucial importance in the inhibition of viral transmission, the immune modulating effects of several nutrients help support optimal immune function.

Why choose Bio-Immunozyne Forte™ from Biotics Research Corporation? Bio-Immunozyne Forte™ is a unique, broad-spectrum formula which may be used in lieu of a general multiple vitamin. It consists of a variety of nutrients and factors which support immune function. **Vitamin C** and **bioflavonoids** have been well documented in their support of healthy immune function via the immunological activity of leukocytes, interferon, and inflammatory reactions to promote resistance to infection. **Neonatal Thymus** gland concentrate is one of many nutritive elements which support neutrophil production and cell mediated immunity. Cell mediated immunity is crucial in the body's resistance to yeasts, fungi, parasites, bacteria, and most importantly, viruses, because it is a frontline defense that does not require antibody production. **Zinc**, an essential cofactor for over 70 enzymes, is of vital importance for the highly proliferating cells of the immune system, particularly monocyte and macrophage function, as well as affecting the number and activity of neutrophil granulocytes and natural killer (NK) cells. **Vitamin A** maintains a distinct action on cellular immunity. In addition to its role in the support of mucosal surfaces, it also aids in maintaining lymphatic tissues, and in antibody production, particularly that of secretory IgA. Another antioxidant with marked effect on immuno-activity is **Vitamin E**, which in addition to its protective effects on gastric mucosa, has been shown to improve immune responsiveness, as evidenced by a decrease in lipid-peroxidation, ie. PGE2. Other ingredients in **Bio-Immunozyne Forte™** include: **L-Lysine**, **Echinacea**, **Capsicum annum**, **Chlorophyllins**, **methyl donors** and **Lactobacillus acidophilus** (DDS-1). As always, you can count on Biotics Research Corporation to offer superior nutritional products supplying "The Best of Science and Nature."
