For the Health of your Patients:

Vitamin A is a potent, fat soluble vitamin that supports many crucial roles within the body. In addition to its well known role in improving night and low-light vision, vitamin A is also needed for the structure and integrity of epithelial cells that comprise the skin, mucosal membranes, respiratory and reproduction passages, along with the lining of the intestine. It is also required for skeletal growth and maintenance, and plays an important role in immunological functioning. Vitamin A deficiency is frequently associated with fatigue, dry skin, eyes, mouth, or hair, calluses on the hands or feet, heel cracks, acne, poor growth, impaired low-light vision, and insomnia. Caution should be applied when utilising vitamin A and any of the fat-soluble vitamins. Excessive doses can cause many problems.

For the Health of your Practice:

Bio-Ae-Mulsion Forte® is a singularly unique supplement to Biotics Research. Thorough research culminating in a proprietary process utilising natural gums and emulsifiers results in a vitamin A supplement with as small of a particle size as possible. This small particle size is akin to the particle size of emulsified fats found in breastmilk - nature's most effective delivery system. This results in a unique delivery system that is absorbed directly into the lymphatic system, which is vastly superior to competitors' products that rely on harsh chemicals and synthetic detergents to break down the hydrophobic bonds between the fat soluble vitamin and water. These chemically altered fat-soluble vitamins enter the blood stream and are much more likely to cause toxicity issues than natural emulsion equivalents like **Bio-Ae-Mulsion Forte®**. Just like when you make salad dressing, you can combine the oil and water by shaking it together, but if you let it sit for any length of time, the two will naturally separate into distinct layers. **Bio-Ae-Mulsion Forte®** is a true emulsification that will retain its crucial integrity so absorption is optimised. If you want to perform a simple test to compare **Bio-Ae-Mulsion Forte®** to competitors' Vitamin A emulsifications, place a few drops of each supplement into a glass of water and observe them the next day. **Bio-Ae-Mulsion Forte®** will maintain its emulsification while competitors' products are quite likely to be found floating on the surface of the water. You can count on Biotics Research Corporation to bring you "The Best of Science & Nature".
